

Pen Testing Solutions.

Fast, Cost-effective and Secure

The attack surface is changing and so should your approach to security. Secure your organisation from cyber attacks and breaches with our fast and cost-effective penetration testing solutions. Access trusted network and cyber security expertise to help protect your business and meet regulatory, risk and compliance obligations.

"Penetration testing is a critical part of any security program. Without it, you're essentially flying blind and hoping for the best."

Troy Hunt

What is Penetration Testing

A penetration test or ethical testing is an authorised simulated attack on an organisation's IT environment to identify, test and highlight vulnerabilities in your security posture.

This cyber security technique identifies vulnerabilities (or gaps) in the environment including the potential for unauthorised parties to gain access to your organisation's computer systems, network or web applications.

Quick to Scope and Easy to Implement

Access easy-to-read and actionable reporting that's delivered within a week, allowing for proactive decision-making and risk management.

Improved Security, Risk & Compliance Posture

Proactively uncover vulnerabilities, strengthen your security posture and protect your business against the latest risks using a methodical approach.

Security Consultancy and Sector Expertise

We stay on top of evolving regulations, sector requirements, and technology so that we can guide you on best practices.

Fast, Cost-Effective and Scalable

A range of solutions designed for business customers that can scale to meet business size and needs. Insurance and board obligations can now be met without breaking the bank.

Scan, Detect and Protect

Uncovering emerging risks quickly and allowing for well-informed decisions to mitigate vulnerabilities supported by cyber experts on best practices.

How it works

Scope and Business Requirements

Workshop with your IT teams to determine any existing concerns or issues that need to be addressed in the tailored tests.

Gather information on the target system, such as IP addresses, network configurations, software versions, and potential entry points that could be exploited.

Perform Penetration Test

Superloop's cyber security experts conduct penetration testing, and our team identifies vulnerabilities in the target system.

This involves scanning for open ports, assessing weaknesses in software configurations, and looking for vulnerabilities in applications or services.

Report & Remediation

The findings from the penetration test are documented in an easy-to-read report that identifies exposed vulnerabilities and risks and includes practical recommendations to uplift your organisation's security posture.

Superloop is your single provider solution for all networking and security needs.

The highest levels of performance and security will be assured by the application of ISO 9001 Quality Management and ISO 27001 Information Security Management systems and processes that underpin the Superloop approach to service delivery.

Superloop Cyber Security Credentials

- 250K+ users protected across our security operations
- 20+ years' experience in Cyber and Security
- ASX Listed, Tier 1 provider delivering Network, SASE, SSE and SD-WAN solutions
- Winner of Palo Alto Networks "Australian/NZ Managed Services Security Provider of the Year" Award, 2022
- Providing full suite of Cyber and Security Audit, Risk and Consulting Services
